1. Using the example on the left, run in a cross-tab the mean/average time for each medium (including zeros) against your target (e.g., Women age 50+)
2. Results will populate in the weighted (000) row
$\Rightarrow$ Example:
Social Media: 1.92 needs to be converted into hours and minutes. To calculate minutes, multiply $. \underline{92} \times 60$ minutes $=55.2$ minutes.
The average time women 50+ spend on social media is 1 hour and 55 minutes (or 115 minutes).

## Media consumption in a typical day - Women age 50+

Calculate the average time for each medium in minutes:
TV - Any Platform = 6 hours 38 minutes (398 minutes)
Internet - Any Device $=5$ hours 32 minutes (332 minutes)
Audio (Radio/Podcasts/Streaming Music) $=1$ hour 5 minutes ( 65 minutes)
Magazines = 16 minutes
Newspapers $=8$ minutes
Calculate the sum of the average time spent with any media in an average day:

TV + Internet + Audio + Magazines + Newspapers = 819 minutes or 13
hours 39 minutes, the average (or mean) time/day spent with any media

## Calculate percentages for each media:

Divide the number of minutes spent with each media by total minutes spent with any media.
Example: Radio/Podcasts/Streaming Music: 65 minutes/819 minutes $=$ .0793 or $8 \%$ (rounded up from 7.9\%)

Nearly half of the time spent with media in a typical day for women $50+$ is spent watching TV.
